Introduction

The Restaurant Billing System is a web-based software application developed to simplify and automate the billing process of a restaurant.

The system helps restaurant staff manage food items, create customer bills, and print invoices easily. It reduces manual calculations, saves time, and provides an efficient way to handle daily billing activities.

The system is designed using modern web technologies to provide a simple, fast, and user-friendly interface.

System Description

The Restaurant Billing System allows authorized users to access the system, manage inventory items, generate customer bills, and print final invoices.

The main purpose of this system is to replace manual billing methods with an automated digital solution.

The system consists of two main modules:

1. User Authentication

2. Billing System

The system provides secure access and accurate billing operations for restaurant employees.

Technologies Used

The Restaurant Billing System is developed using the following technologies:

Front-End Technologies:

HTML (HyperText Markup Language)

- Used to create the structure of web pages.
- Provides forms, buttons, tables, and layouts.

CSS (Cascading Style Sheets)

- Used for designing and styling the user interface.
- Improves the appearance and usability of the system.

JavaScript

- Used to add functionality and interactivity.
 - Handles calculations, validations, and dynamic updates.
-

MODULE 1: USER AUTHENTICATION

User Authentication

User Authentication is a security module that allows only authorized users to access the Restaurant Billing System.

The system verifies user credentials before providing access to billing features.

The main purpose of authentication is to protect restaurant data and prevent unauthorized access.

User Authentication Features

The User Authentication module includes:

- User login system.
- Username and password verification.
- Secure access to billing functions.
- Prevention of unauthorized usage.

After successful login, the user can access the billing system.

MODULE 2: BILLING SYSTEM

Billing System

The Billing System is the main module of the application that manages restaurant billing operations.

It allows users to add food items, calculate total amounts, generate customer bills, and print invoices.

The system automatically performs calculations to reduce errors and improve billing speed.

Setup Inventory

The Setup Inventory feature is used to manage available food items in the restaurant.

Functions include:

- Adding new food items.
- Updating item details.
- Setting item prices.
- Removing unavailable items.
- Maintaining a list of available products.

Inventory information helps users select correct items while creating bills.

Bill an Order

The Bill an Order feature allows restaurant staff to create customer bills.

Process:

1. Select food items from inventory.
2. Enter required quantity.
3. System calculates item prices automatically.
4. Total bill amount is generated.
5. Order details are stored.

This process makes billing faster and more accurate.

Print an Bill

The Print an Bill feature allows users to generate a physical copy of the customer's invoice.

The printed bill contains:

- Restaurant name.
- Order details.
- Food items.
- Quantity.
- Price.
- Total amount.

This helps customers receive proper payment records.

Functional Requirements

The system should provide:

- Secure user login.
- Inventory management.
- Food item selection.
- Automatic bill calculation.

- Order billing.
 - Invoice generation.
 - Bill printing.
-

Non-Functional Requirements

The system should provide:

- Simple and user-friendly interface.
 - Fast response time.
 - Accurate calculations.
 - Secure user access.
 - Reliable performance.
-

Advantages of the System

Advantages:

- Reduces manual billing work.
 - Saves time.
 - Minimizes calculation errors.
 - Provides organized inventory management.
 - Generates accurate invoices.
 - Improves restaurant efficiency.
-

Conclusion

The Restaurant Billing System provides an effective solution for managing restaurant billing activities.

By using user authentication and billing features, the system provides secure access, easy inventory setup, quick order billing, and efficient bill printing.

The use of HTML, CSS, and JavaScript makes the system simple, interactive, and easy to use.
